"We were able to find IT Innovators on the Microsoft PinPoint website. It was fast and easy to find the qualified IT service provider that really understood our business needs. What a great service Microsoft provides to assist a business in finding a local IT company that meets Microsoft standards. That gave us peace of mind right from the start."

Cornel Catrina, President

Business Need:

Neige, Inc. had many business needs that called for multiple IT solutions. They needed group email and calendars for secure access when out of the office, as well as, when they were in the office. They also needed the ability to store their data in a centrally shared location that was being backed up for protection. Other needs included secure remote access to their PC's and the data from the outside world at their convenience. Lastly, they needed to know that their company information was secure and safe from outside threats and viruses.

Cornel knew the technology was important and needed to find the right solution provider. He also knew this technology would need to be managed and maintained to run smoothly. This would insure his investment would last for years to come.

Solution:

Cornel used Microsoft PinPoint to find IT Innovators. A local Microsoft Gold Partner that understood his business needs and could provide all of the solutions Cornel needed to make his business thrive and grow. IT Innovators implemented a Microsoft Small Business Server with Exchange, a SQL Server, a Sonicwall Firewall, a centralized Trend Micro solution and a monthly maintenance and ProCare plan.

Benefits:

Neige sees many benefits from this Win-Win scenario. They have already seen a significant difference in productivity with the scheduling of their meetings. An improved speed with the new server. Cornel stated, our employees no longer need to hunt for the data now, it's all in one location and I know it's being backed up. And since they travel, being able to work remotely benefits them as well as the company.
